

HEALTHCARE

RELEVANT EXPERIENCE

LONDON INDEPENDENT HOSPITAL, STEPNEY GREEN

Tuckers provided technical expertise and supervision for all services installed in this redevelopment of the old London Jewish Hospital. Autoclaves, instrument sterilization equipment, nurse call system, bedhead trunking, kitchen equipment and medical gas installations were all specified, together with general HVAC, electrical and lifts for the turn-key Main Contractor. On-site supervision was provided throughout the construction and commissioning.

GATWICK PARK HOSPITAL

All services for this new self-contained private hospital including operating theatres were designed and specified by Tuckers.

ST MARY'S HOSPITAL MEDICAL SCHOOL, PADDINGTON

Various refurbishment projects for this world-renowned centre were designed, specified and supervised including re-wiring, boiler replacement and lift repairs.

MRI SCANNERS, GUYS AND NOTTINGHAM

These systems were installed by Phillips into existing buildings in the above hospitals. Tuckers were employed to design and specify all related services installations together with advice on limiting the escape of magnetic fields by the construction of a steel tunnel.

ALEXANDRA HOSPITAL, WALTERS LADE, KENT

All services for this new self-contained private hospital including operating theatres were designed and specified by Tuckers.

METHODOLOGY

The use of computer technology in healthcare is becoming increasingly prevalent which imposes new requirements on the services installations. Traditional and tested methods must also be applied where appropriate but all in a cost effective manner.

Tuckers are extremely well placed to advise on how these objectives can be achieved, combining our experience of commercial and public developments.

Tuckers personnel are kept up to date with technology developments by regular Continuing Professional Development briefings. Our membership of BSRIA can also be utilised together with our extensive technical library and Internet research.

QUEEN VICTORIA HOSPITAL, EAST GRINSTEAD

Queen Victoria Hospital, East Grinstead (QVH) was built as a community hospital in the 1930s and developed as a specialist unit in World War 11 becoming world famous for their pioneering treatment of badly burned RAF and allied air crew. Tuckers have been involved in the design of services for refurbishment of the prosthetics laboratory and associated office areas.
